#### **DETAILED ACTION**

# Response to Amendment

This Office Action is responsive to the Amendment field December 13, 2005. The claims are rejected as follows:

- Claims 1-5, 9-13 & 15-18 are rejected under 35 U.S.C. 103(a) as being unpatentable over Fischer DE 196 11 510 in view of Goller et al., U.S. Patent 4,185,131.
- Claim 14 is rejected under 35 U.S.C. 112, second paragraph, as being
  indefinite for failing to particularly point out and distinctly claim the
  subject matter which applicant regards as the invention.

A brief reiteration is recited below.

### Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claim 14 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 14 contains the trademark/trade name Nafion®. Where a trademark or trade name is used in a claim as a limitation to identify or

describe a particular material or product, the claim does not comply with the requirements of 35 U.S.C. 112, second paragraph. See *Ex parte Simpson*, 218 USPQ 1020 (Bd. App. 1982). The claim scope is uncertain since the trademark or trade name cannot be used properly to identify any particular material or product. A trademark or trade name is used to identify a source of goods, and not the goods themselves. Thus, a trademark or trade name does not identify or describe the goods associated with the trademark or trade name. In the present case, the trademark/trade name is used to identify/describe an aqueous solution and, accordingly, the identification/description is indefinite.

### Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 1-5, 9-13 & 15-18 are rejected under 35 U.S.C. 103(a) as being unpatentable over Fischer DE 196 11 510 in view of Goller et al., U.S. Patent 4,185,131.

With respect to claims 1, 9 & 13, Fischer teaches an ink for producing a membrane electrode assembly for a fuel ell comprising 3.1wt% Pt/C catalyst, 30.9wt% of a 5% strength ionomer solution in 90 parts isopropanol and 10 parts water, 37.2 wt% glycerine, 24.8wt % water, 2.5 wt% tetrabutylamonium hydroxide and 1.5 wt% of a pore former. The water content of the ink is 27.7 wt% in total. See Applicant's instant disclosure bridging pages 2 & 3. With respect to claim s 10-12, the ink comprises a Pt/C catalyst which, according to the instant specification on page 7, lines 2-3 is platinum powder. In re claims 16-18, the polymer electrolyte membrane is coated with the ink in accordance with the screen printing process on page 3 of the instant disclosure.

Fischer is silent to: containing a linear dialcohol with a flash point higher than 100°C and being present in the ink in a concentration between 1 and 50 wt%, with respect to the weight of water (claims 1, 2 & 15); the linear alcohol being a dihydric alcohol wherein hydroxyl groups are not adjacent to each other (claim 3); an alcohol chain structure that is aliphate-CH<sub>2</sub> groups, optionally with oxygen atoms between said CH<sub>2</sub> groups (claim 4); or a dialcohol selected from the group consisting of ethylene glycol, diethylene glycol, propylene glycol, dipropylene glycol or butanediol (claim 5).

However, Goller teaches the functional equivalence of glycerin and ethylene glycol as organic solvent inking vehicles for fuel cell constituents (col. 5, lines 5-20).

Therefore, the subject matter as a whole would have been obvious to one having ordinary skill in the art at the time the instant invention was made because even though Fischer does not teach ethylene glycol, Goller teaches that ethylene glycol and glycerine are art recognized equivalent materials for use as organic solvent inking vehicles, and therefore on having ordinary skill in the art would have substituted one organic solvent for the other.

In re claim 1, it is reasonable to expect that the ethylene glycol of Goller is a linear dialcohol with a flash point higher than 100°C, because Fischer in view of Goller employ the same organic solvent as the instant claims.

Additionally, "products of identical chemical composition can not have mutually exclusive properties." A chemical composition and its properties are inseparable. Therefore, if the prior art teaches the identical chemical structure, the properties applicant discloses and/or claims are necessarily present. In re Spada, 911 F.2d 705, 709, 15 USPQ 2d 1655, 1658.

As to the limitation in claims 1, 2 & 15, with regard to the organic solvent being present between 1 and 50-wt% by weight of water, it would have been obvious to one having ordinary skill in the art at the time the invention was made to employ said water concentration, since it has been held that discovering an optimum value of a result effective variable involves only routine skill in the art. In re Boesch, 617 F.2d 272, 205 USPQ 215 (CPA 1980). The skilled artisan recognizes that the amount of water directly effects the dispersion ability of the ionomer in the ink.

In re claims 3 & 4, according to the instant disclosure bridging pages 4 & 5, ethylene glycol is a dihydric alcohol with hydroxyl groups not adjacent to each other with a chain structure that is aliphate-CH<sub>2</sub> groups. Additionally, "products of identical chemical composition can not have mutually exclusive properties." A chemical composition and its properties are inseparable.

Therefore, if the prior art teaches the identical chemical structure, the properties applicant discloses and/or claims are necessarily present. In re Spada, 911 F.2d 705, 709, 15 USPQ 2d 1655, 1658.

## Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claim 8 is rejected under 35 U.S.C. 103(a) as being unpatentable over Fischer DE 196 11 510 in view of Goller et al., U.S. Patent 4,185,131 and further in view of Ramunni et al. U.S. Patent 6,022,634.

Fischer in view of Goller teaches an ink coated on a membrane electrode assembly as described hereinabove.

Fischer is silent to a gas distributor substrate coated with the ink.

Ramunni teaches that it is conventional to coat ink catalyst on gas distributor layers in order to form membrane electrode units. Specifically the ink electrodes are coated of the gasket. The gaskets are provided with channels for feeding the gaseous reactants and discharging the excess reactants and condensates, thereby functioning as gas distributors. See Example 1.

Therefore, it would have been obvious to one of ordinary skill in the art at the time the instant invention was made to coat the catalyst ink of Fischer on a gas distributor layer, because Ramunni teaches that it is well known to employ ink catalyst coating on gas distributor layers in fuel cells.

# Response to Arguments

Applicant's arguments, see pages 7-8, filed December 13, 2005, with respect to the rejection of claims 1-7 are not persuasive. Specifically, applicant argues that Goller and Fischer are not combinable references, because the ink set forth in Goller does not contain electrocatalyst material. Therefore, because Goller teaches a different system, the reference does not teach the equivalency of glycerin and ethylene glycol. This argument is not persuasive. Both Goller and Fischer teach the electrocatalyst platinum. See Goller at column 5, lines 55-65. Therefore, the equivalency teaching of glycerine and ethylene glycol is

correct because the ink set forth in Goller contains the same electrocatalyst material as Fischer.

Applicant's arguments, see pages 8-10, with respect to Goller teaching the functional equivalence of glycerine and ethylene glycol is not persuasive. First, it is unclear as to how Coller not working with "precatalyzed" carbon relates to the equivalence of glycerine and ethylene glycol. The reference teaches that both glycerin and glycol are used for the same purpose in the same system. See column 5, lines 5-20. With regard to electrode B not being catalyzed by the same technique as A, it is also unclear as to how this distinction is relevant. Again, the reference illustrates that both glycol and glycerin may be used to prepare ink materials, irrespective of whether the electrodes were made by different materials. Lastly, it is asserted that Goller does not cure the deficiencies of Fischer because Goller teaches that the electrocatalyst is applied after the ink is compacted and sintered, thus, before it is ready for catalyzation. This argument is not persuasive, the claimed invention is directed to a product, not a process of preparing the ink. Furthermore, Goller was not relied upon for its method, it was used to illustrate the equivalency of glycerine and ethylene glycol. Therefore, the rejections are maintained.

#### Conclusion

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

Any inquiry concerning this communication or earlier communications from the Examiner should be directed to Monique Wills whose telephone number is (571) 272-1309. The Examiner can normally be reached on Monday-Friday from 8:30am to 5:00 pm.

Application/Control Number: 09/915,764 Page 10

Art Unit: 1746

If attempts to reach Examiner by telephone are unsuccessful, the Examiner's supervisor, Michael Barr, may be reached at 571-272-1414. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR.

Status information for unpublished applications is available through
Private PAIR only. For more information about the PAIR system, see
http://pair-direct.uspto.gov.Should you have questions on access to the
Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
